EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Paul Urbanski on 6/5/2012.

Amendments to the Claims

The application has been amended as follows:

Claim 14. (Currently Amended) A non-transitory machine-readable medium having stored thereon data representing a set of instructions for identifying as being useful or otherwise valuable product/service reviews in a database coupled to a distributed communication network, the sets of instructions which, when executed by a machine, cause the machine to:

display product/service reviews from the database on a client display connected to the database over the network;

provide an interactive element associated with each of the displayed reviews on the client display, which when clicked by a user, indicates that the user has found a displayed review associated with a product/service helpful in determining whether or not to purchase or use the product/service;

receive at the database an indication that the user has clicked the interactive element, and incrementing a count of a stored number of indications for the review (1) in response to the indication and (2) if the stored number of indications does not exceed one indication for the review from the user; display the count of the number of indications for the review on the client display together with the review; and wherein the sets of instructions which, when executed by the machine, further cause the machine to sort the reviews in ascending or descending order as a function of the number of indications tallied for each review, sequentially display the reviews in the sorted order and recurrently tally the number of indications and re-sort the reviews for a subsequent display.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:
3. Rejections of the instant claims under 35 USC 103 over NowThis in view Nielsen and Epinions in view of Nielson were appealed before the BPAI. Both rejections were reversed.
4. With regard to the rejection over NowThis in view of Nielsen, the BPAI found that "sending an error to the user if the interactive element is clicked more than once by the user for the review in an interactive voting environment was not common knowledge at the time of the invention, because feedback could be provided without sending an error to a user," that "NowThis is merely a blog entry and no further description or details of

any actual system were provided, no further evidence was referred to in either the blog entry or the Office Action to show that there ever was a "ratings-rating" system, and no further evidence was referred to that shows whether more than one review was ever stored by Amazon," and "NowThis and Nielsen, either separately or in the proposed combination, do not provide sorting the reviews ...as a function of the number of indications tallied for each review ... and resorting the reviews for a subsequent display."

Thus, even though Amazon most likely stored more than one review, there is no evidence of record that demonstrates that Amazon provided for the sorting of the reviews as a function of the indications tallied for each review ... and resorting the reviews for as subsequent display. Further, no other prior art of record shows explicitly a system where reviews for ratings are collected for a plurality of users and the reviews are sorted and resorted as a function of the number of indications tallied for each review.

5. With regard to the rejection over Epinions in view of Nielsen, the BPAI reversed for the same reasons as presented with regard to NowThis in view of Nielsen, stating that Epinions does not significantly add to the descriptions in NowThis.

6. Other rating-ratings systems were known. For example, US 5,872,850 teaches that one such example was known. However, no tallies appear to be created that involve more than one user, where the ratings are separately maintained for each user to control who's ratings are displayed to that specific user (5,872,850: Column 1, lines 23-37). US 5,884,282 teaches a similar system, where the ratings are separate for

each user, where no tallying is provided for ratings from a plurality of users (5,884,282: Claim 15 and Column 31, lines 10-20).

Accordingly, no reference appears to provide specific disclosure of a ratings system that collects indications that a review was helpful from a plurality of users, tallies the indications, then sorts the reviews as a function of the number of indications tallied for each review.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
